Project 2 – Report

For this project, I built a website for a nail salon. The name of the salon is The Nail Suite. I was able to work with the owner (client) throughout the entire process. I am really proud of the header for the desktop site. The client sent me a site that she liked, and I used that as inspiration. I feel the header is clean, easy to navigate, and incorporates the aesthetic of the salon and artist really well. I feel I fell short on the responsiveness of it. Two of my three critiques used their phones to access the site and that is definitely a moving trend, especially for this type of site. If I had more time I would spend more time on the mobile size.

After meeting with the instructor, she made a lot of really good suggestions, including, to organize the gallery, clean up the footer, and make the certification list a hidden list. I worked to implement these and went over the changes with my client. She preferred the gallery the way it was so I focused on making the previous design cleaner and more presentable.

A huge obstacle for me, was making the hamburger menu. I spent hours working on it. Getting it functional and looking good. I ultimately decided to use a bootstrap dropdown for mobile size. This project really stretched my knowledge and skills and forced me to learn new things and master old things.

The great thing about this project, is I can continue to work on it and then update and maintain it when the client deploys it.
